Remember, we can also convert PDF to any file types, we are ready to convert PDF files to Word, Excel, PowerPoint, JPG, PNG, DOC, DOCX, TXT, HTML, HTML. So far, we have considered the variation in the ratio of the numbers of letters in each "roll" with regard to the "big roll" made at the start of the game. Let us also consider the variation in the number of letters in each "roll" with respect to the second "big roll" that is made at the end of the game. For instance, the player can (a) win the game by having "rolls" that are equal in number to the sum of the numbers of the letters in all the "rolls" that were made in the game up to that point (and thus, is this "roll" then the winning "roll" of the game); or (b) lose the game by having "rolls" that are equal in number to the sum game up to that point (and thus, is this "roll" then the losing "roll" of the game). This variation in the winning and losing possibilities of the game is of importance since we can now readily arrange for there to be a certain number of "rolls" made in the game. It is this variation in the number of the "rolls" that is dependent upon the number of "rolls" that were made in the game up to that point, that is what is relevant for us in this explanation of the variation in the number of the letters in each "roll" with respect to the second "big roll". If we denote the sum of the numbers of letters in the "rolls" that were made in the game up to that point, by the letter "S", we find that S represents the first "big roll". { "images" : [{ "idiom" : "universal", "filename" : "heart_plain_red 82157476af
